Data

Data is gathered from the world data bank. I've tried to combine two different datasets this assignment. To show the correlation between Child deaths and GDP

Design

- All continents are a different color
- The tooltip displays detailed information
- Buttons can be pressed to show data from different years
- When circles are selected they will pop-out
    - Other circles will be reduced in opacity.
- The mouse-over in the legend will show all the countries in that contintent.
